

Discover Sea NXT:

The elite of underwater scooters, combining innovation, design and performance

A visionary French brand

Sea NXT is an innovative French brand specializing in the design of cutting-edge underwater scooters. With its ELITE model, presented for the first time at the Cannes Yachting Festival, Sea NXT caused a sensation by meeting the expectations of underwater adventure enthusiasts. With over 17 years' experience in aquatic propulsion, Sea NXT draws on in-depth expertise and a solid network of partners to offer high-quality products and services that combine technology, comfort and safety.

A response to user expectations

The ELITE model has been designed to meet the requirements of both amateur and professional underwater explorers, in terms of weight, price and, above all, performance. Thanks to Sea NXT's accumulated experience in the distribution and after-sales service of aquatic equipment from renowned brands such as Yamaha and Seadoo, every detail of the ELITE has been optimized. From conception to manufacture, Sea NXT has worked with specialized engineers and designers to transform user expectations into concrete innovations, giving this scooter unrivalled ergonomics and efficiency.

A Unique and Personalized Riding Experience

Sea NXT stands out for its advanced technical approach. The ELITE underwater scooter incorporates innovative features that significantly enhance the underwater riding experience:

- **Carbon design and dual motorization:** The ELITE is the first and only carbon divejet equipped with two propulsion motors. This dual motorization ensures optimum stability and comfort for the user, even when diving to extreme depths.
- **Lightweight and maneuverable:** Weighing just 22 kg, the ELITE model represents a technical feat, offering an ideal balance between weight, speed and range, allowing intuitive handling for effortless immersion.
- **Advanced navigation technology:** This scooter is equipped with a real-time GPS navigation system, integrated into a 5.5" LCD screen resistant to marine pressure, enabling divers to find their way even in deep water.
- **Connectivity and customization:** Thanks to a protected USB-C port, the ELITE enables on-the-spot software updates, as well as on-demand customization. This level of connectivity is a first for underwater scooters, paving the way for new experiences and developments.

A highly durable, eco-friendly underwater scooter

With durability in mind, the ELITE scooter is designed to be fully modular, facilitating maintenance and keeping repair time to less than an hour. The quick charger and fireproof carrying case include Sea NXT's commitment to offering complete solutions tailored to the needs of its users. Manufactured on the Côte d'Azur in France, the ELITE scooter embodies French know-how in the world of water sports.

Worldwide presence and recognition

Distributed internationally, Sea NXT relies on strong partners like Blu3 in the USA to meet global demand. Present at major boat shows such as Fort Lauderdale, Rome and Düsseldorf, Sea NXT confirms its position as a leader in aquatic innovation. The recently launched GOLD color joins the original red, green, blue and black for an exclusive, elegant design.

A forward-looking company

Every project at Sea NXT is driven by a deep passion for the ocean and technological innovation. For more information on our products and news, follow us on our social networks and visit our official website: www.sea-nxt.com. You can also browse our online catalog to discover our full range.

With Sea NXT, experience the excellence of aquatic propulsion, and plunge into a world of boundless underwater adventure.
