

SEA NEXT 

Present a fusion of technology and  
elegance

**ÉLITE, all carbon.**

Designed,  
assembled  
and tested in  
**France**

**Carbon hull**

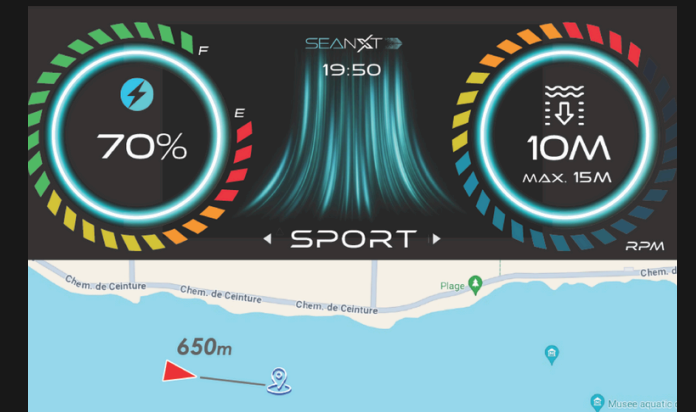

Lightweight, rigid and elegant construction

**Twin-motor propulsion**

For optimum hydrodynamics and a top speed of over 21 km/h.

# GPS navigation with on-screen map interface

We've innovated by integrating an offline map navigation system, directly accessible from the interface's home page. At the controls of your Elite scooter, your current position and starting point will be clearly displayed on the map as soon as the unit is switched on.

The user interface is equipped with interchangeable themes. Themes (colors/icons/logos) can also be customized on request.

# Push the boundaries of marine exploration with the Elite

With the first charger for waterscooters offering adjustable output between 1A and 15A.

Forget about optional fast chargers as additional accessories. The Elite offers fast, slow and medium chargers.

Simply adjust the inverter and you'll see the display indicate the modified output current.

SCAN ME

**700N** Poussée Max.  
**1H (mode éco)** Autonomy

**21 Km/h** Max. speed

**40M** Max. depth

**4 MODES** Shark, Sport, Cruise, Eco

# SeaNXT, Aware of the dangers

Packaging can be customized to fit other lithium-ion products for a fee. Please contact us for further information..

Aware of the dangers of lithium-ion technology if it becomes unstable. As we offer a 24Ah battery, about 1.5 times the size of the competition, it's our duty to package it in a safe, customer-friendly way. With every SeaNXT Elite, **we offer fireproof packaging.** We guarantee your peace of mind, no matter how long or where your ELITE is stored.
